Abstract:

Main idea of this thesis is to collect book readers into one place to make world better. From the old times, book is the most important instrument that carries knowledge and culture long time to save the history, in order to keep track society, who they were and who they will be.

In short, this platform allows users to read books in Kazakh language and if it will become popular, upgraded version with the new features would not keep waiting. Moreover, the books will be presented with the new Latin alphabet to check the influence between readers.

Problem statement:

Today, Kazakh language is the main problem of our country, which raises many questions. To solve this problem the government of the Republic of Kazakhstan is on way to make historical step to the future by changing Cyrillic alphabet to the Latin alphabet. Therefore, this platform will help to keep book heritage alive in our digital age. The proposed approach is to develop systematic application for the community of e-book readers, which will ease their tasks with advanced functionalities.

Motivation:

Firstly, lack of resources in native language forces people to resort lots of operations just to read or download needed content. Secondly, rising popularization of books among the youth generation and thirdly, it is important to help authors to be prepared to the language transition tomorrow.

Finally, only one website afford an opportunity to book readers and this one cannot handle with many troubles, which does not allow to user to perform even though simple tasks.

Significance:

Application, which will play the main role in modern era of Kazakhstan to reach high achievements in nation's culture. In addition, it will collect likeminded people into one place to settle a question once and for all.

Contributions:

Development of the platform will give benefits to rethink challenges that our nation experienced from the time spring up.
